

**Portsmouth, NH Peirce Island Wastewater Treatment Facility
SARS-CoV-2 Biomarker Results Summary**

Report Date: August 18, 2022; Sampled by: Kathy Sanborn, August 16, 2022
Prepared by Kellen Sawyer, Reviewed by Paula Mouser, P.E., PhD

Dates Sampled for this Monitoring Period:

Tuesday, August 16, 2022*
Tuesday, August 9, 2022
Tuesday, August 2, 2022
Tuesday, July 26, 2022
Tuesday, July 19, 2022
Tuesday, July 12, 2022
Tuesday, July 5, 2022
Tuesday, June 28, 2022

*New samples since last report

Method: A 24-hour flow weighted composite sample was taken from August 15-16, 2022. This sample was preprocessed and extracted using a solids separation, Ceres Nanoscience viral concentration, and Kingfisher extraction approach. Two viral markers (N1 and N2) were quantified via Bio-Rad QX200 ddPCR.

Results: Both the SARS-CoV-2 N1 and N2 viral biomarkers were detected in the composite sample taken August 15-16, 2022. Biomarkers decreased considerably from last week, but levels are still among some of the higher values of the five facilities reported to date this week in the NH wastewater surveillance program (Figure 1).

Table 1: Sample date and biomarker results. "BDL" represents values below the quantified limits of instrument detection of 172 copies/100 mL wastewater.

Sample Date	SARS-CoV-2 Biomarkers	
	N1 copies/100mL	N2 copies/100mL
08/16/2022*	784	894
08/09/2022	2,165	2,408
08/02/2022	343	501
07/26/2022	348	450
07/19/2022	1,395	1,715
07/12/2022	1,465	1,555
07/05/2022	668	896
06/28/2022	2,572	2,712

For more detailed information regarding local, county, and statewide COVID-19 infections, please refer to the data reported through the New Hampshire Division of Health and Human Services website <https://www.covid19.nh.gov/dashboard>.

Since June 6, 2022, the minimum values for SARS-CoV-2 measured in New Hampshire were below analytical detection limits (BDL) while the maximum reported N1 and N2 values across 12 reporting facilities have been 4,651 and 4,939 copies/100 ml wastewater, respectively. For the week of August 15, the maximum values measured at five reporting facilities are 843 and 897 copies/100 ml wastewater for N1 and N2, respectively.

Figure 1. Range of SARS-CoV-2 biomarker values measured at participating wastewater facilities since the NH wastewater surveillance program began in early June 2022.
